

Digital Music Store Analysis

SQL PROJECT
BY KANIKA ARYA.

Objective: This project will analyze the music playlist database. You can examine the dataset with SQL and help the store understand its business growth by answering simple questions.

Question Set1. Easy

- Who is the senior most employee based on the job title?
- Which country have the most invoices?
- What are the top 3 values of total invoices?
- Which city has the best customers? We would like to throw a promotional music festival in the city we made the most money? Write a query that returns one city that has the highest sum invoice total? Return both the city name and sum of all invoice total?
- Who is the best customer? The customer who spent the most money will be declared best customer. Write a query that returns the person who has spent the most money?

Question Set2: Moderate

- Write a query to return the email, first name, last name, and genre of all rock music listeners. Return your list ordered alphabetically by email starting with A.
- Lets invite the artists who have written the most rock music in our dataset . Write a query that returns the artist name and track count of the top 10 rock bands.
- Return all the track names that have a song length longer than the average song length. Return the Name and milliseconds for each track. Order by the song length with the longest songs listed there.

Question Set 3:Advance

- Find how much amount spent by each customer on artists ? Write a query to return customer name, artist name and total spent?
- We want to find out the most popular music genre for each country. We determine the most popular genre as the genre with the highest amount of purchases. Write a query that returns each country along with the top genre. For countries where the maximum number of purchases is shared returned all genres?
- Write a query that determines the customer that has spent the most on music for each country. Write a query that returns the country along with the top customer and how much they spent. For countries where top amount spent is shared, provide all provide all customers who spent this amount.?
